

# Hydraulic oil and slide-way fluid and water-solubility metal-working fluid

## Product Features

- Sliding surface oil and hydraulic oil leaks-active agent incorporated into the coolant - Coolant my problem and that corruption
- My coolant leaks-hydraulic and sliding surface oil contamination - problems of corruption and
- Do my own, so that the water-soluble cutting oil being used to solve the problem of corruption.
  - When the oil is incorporated into the coolant second emulsification and the agonist-soluble cutting oil,
  - Hydraulic oil and hydraulic oil when mixed with oil sliding surface and sliding surface flow also to act.
- **Minimize problems due to corruption**
  - Odor-working environmental degradation
  - Waste, waste generation - Waste costly
  - Healing replacement cost loss
  - Rust, corrosion loss of material Machined Parts
  - Machining precision (roughness) failure occurs

## Hydraulic oil and slide-way fluid and water-solubility metal-working fluid
